

Lincolnshire Knee Clinic

Consultant-Led Specialist Knee Care

ACL Rehab Protocol - Phase 1 (Weeks 1 - 2)

Protect Graft, Restore Extension & Activate Quads

Objectives

Early physiotherapy focuses on swelling control, achieving full extension, and reactivating the quadriceps muscle.

Static Quadriceps Sets

- Technique: Lie flat, push the back of your knee down into the bed to tighten your thigh. Hold for 5 seconds.
- Frequency: 10 repetitions, 4-6 times daily.

Heel Slides

- Technique: Gently slide your heel toward your buttocks, bending your knee as far as comfortable (max 90 degrees).
- Frequency: 3 sets of 10 repetitions, twice daily.

Patellar Mobilisation

- Technique: Gently move your kneecap up, down, and side-to-side with your fingers.
- Frequency: 2-3 minutes, twice daily to prevent adhesions.
