

Lincolnshire Knee Clinic

Consultant-Led Specialist Knee Care

ACL Rehab Protocol - Phase 2 (Weeks 2 - 6)

Range of Motion Progression & Gait Normalisation

Objectives

Restore full range of motion, normalise walking pattern (gait), and transition away from crutches.

Wall Slides

- Technique: Lean your back against a wall, slide down to bend knees to comfortable angle, slide back up.
- Frequency: 3 sets of 10 repetitions, daily.

Stationary Cycling

- Technique: Ride stationary bike with low resistance. Ensure saddle height allows knee to stretch straight.
- Frequency: 10-15 minutes, daily.

Double Leg Mini-Squats

- Technique: Squat down to maximum 60 degrees. Keep knees behind your toes.
- Frequency: 3 sets of 15 repetitions.
