*Consultant-Led Specialist Knee Care*

---

## ACL Rehab Protocol - Phase 3 (Weeks 6 - 12)

*Single-Leg Strength & Balance Proprioception*

### Objectives

Restore single-leg muscle strength, balance, and core stability.

### Single-Leg Press

- Technique: Use light weight, push with one leg focusing on slow control during extension and bending.
- Frequency: 3 sets of 8-10 repetitions.

### Single-Leg Balance

- Technique: Balance on the operated leg on a flat floor, progress to an unstable surface (cushion/wobble board).
- Frequency: Hold for 30-60 seconds, repeat 3-5 times.

### Lateral Step-Downs

- Technique: Stand on a small step, lower opposite heel to touch floor, control knee alignment.
- Frequency: 3 sets of 10 repetitions.
